Findings

Distraction Index (DI): Right DI = 0.28, Left DI = 0.31.
Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**
Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.31.
OA Risk Category: The DI is between 0.31 and 0.49. This patient is at mild risk for hip OA.
Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 8149 canine patients of the LABRADOODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.31 - 0.76) for the breed. The breed average DI is 0.50 (solid square). The patient DI is the solid circle (0.31).

SUMMARY: The degree of laxity (DI = 0.31) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. **No radiographic evidence of OA for either hip.**
